

STUDENT

FILING COVER

To Bind Completed Matter

Course given by

SUBJECT:

For the
NATIONAL SEPARATE-LEAF NOTEBOOK

Patented by E. W. Hall, July 5, 1898.

May 1st. Clear in light & clear with
light N breeze. At 6.30 AM. a
steamer passed up to an anchorage
near Olsen's float. and immediately
began to load ^{Finished at 3.30 PM} ~~herring~~ ^{& packed the salt}
_{cod}

Mr. Olsen states that Mr. J. E. Holley
who was the found in Strong Point,
took 20000 lbs by on Saturday
& Sunday all of which went into
the steamer.

Went over to Coulman's Herring float.
For the 1st time I took 2 1/2 can
4 ♀ herring + 3 herring (♂ & ♀)

The haul was 200 lbs glut
@ 300 to the lb. They had to
use the "wigger" sieve. Also had
20 shad, 20 rock molly, small and
a very small ^{two white perch}

Aug. 24th. The tide is of course out
with low water.

Left Kona, caught a lot of
brown snappers of not uncommon
size, about the battery and
says they follow a good run
of rock fish. He specifies the
occurrence of 2 large ones in
June a few years ago. When
they come away the rock.

Made 1 haul in rock basin with
the 45 ft. seine. Took 2 gillnet
2 muskies, some *Furculus* displ.
(+ *maialis*?), 1 small ul + ^{several} darters.

After lunch made 1 outside,
+ 1 inside haul. Outside a
few darters + a couple of
gillnet. Inside, about 50

yellowish red soil, 1200 ft.
1 ft. 10 in. 10 in. 10 in. 10 in.
also.

Then took over a small
note book to the top of the

Russell's mountain. The
afternoon.

May 2. Day was a
cloudy day. At 10 A.M. I left
left early with Perry, with
James, Henry, and a few
more. Went up to the
mountain and collected. At
1000 ft. I found a very good
2 or 3 inch long, scale.

Returned to Battery for lunch,
& afterwards went to Coulaban
& Hogans float, inspecting the
cutting & roe canning. Then
to ~~the~~ float, & saw
a haul of ~~1000~~ 15000 herring
(glut) 1 shad & 1 small rock.
Thence to battery, making
many hauls, notes later.

Mr. Gannon went around
the lay boats & reports 3
steamers loading everything from
the pounds on the W. side of
Elk rock. It was low tide,
& he saw thousands of
white perch gilled hanging
in the pounds.

He also saw ^{Michael} Mitchell,
(shore seim # 2 below the

letter, it is said to be a
new bill of the same name
today. It is of the same
the same.

It looks like

the same old bill
the same old bill
the same old bill
the same old bill

May 3rd Left the Battery
left Ketchikan in the
Evening at 6 PM.

~~1 ste. loading off Ketchikan~~

3 ste. in. 20 ft. up the NE
and 20 ft. up the SE

loaded to the top. 1 ste. off
Ketchikan and 1 ste. Ketchikan
from ~~the other~~

6 PM After One of the 3 up
the NE River passed not fully
loaded and another was in
sight coming up.

Arrived Henderson 8,45 AM.

Sailed around River & later
in Turner's Creek

May 6th.

Left Porting 4:45 AM. The
Place. Rained all night and
came in cloudy and warm with
showers. Then thick fog, about 8:30 AM.
I took boat out of Porting.
1 PM. Sunday PM.

On the mountain shore about 11
miles we put anchor. I
first the ~~trip~~ ~~land~~
~~place~~ ~~and~~ ~~see~~ ~~if~~ ~~there~~
~~as they~~ ~~do~~ ~~not~~ ~~at~~ ~~all~~
~~the~~ ~~route~~.

1st out above the first one I at
last the route found full of
herring. Also saw 2 seals.

with double line of lines
 2nd 3rd 4th 5th 6th
 7th 8th 9th 10th 11th 12th

1 inch standard

1 Set of 2000 ft. standard

Greater power at 2nd ft. c
 but only half solid with

line

The big test at 1000 ft.
 was a very long one of
 1000 ft. of line

of this region, all of which
is loaded on steamers and
schooners for the factories.
Only a small amount of rice
is put up at this point.
Doubtless found along the bay beach
were solid with herring in the
upper pocket. All these
nets, however, had been in
the water since Friday.

Got back to the Battery at 6.30 Am.

Left Battery 9.30 Am for
H. de S. to pick up some "may shed"
if possible. Did not find
any. ~~Asst. has given up,~~
~~and is taking home his boat.~~
~~Express the opinion that the~~
~~herring season is over.~~

Osburn told me yesterday that
he would not feel much of a year
with such a crew as he has this
year (except what I saw) but would
get a crew of seagulls from Blackville.
It is a matter of common report
that the frost has been following to
whole or in part this season.

From 1 ft to 1 1/2 ft in
15 ft deep. Then about 1 1/2
miles of country of snow
driving 2 & 3 sled (load) 1 horse
each foot, and a few small
sleds. He says that
he got out late, had some
bad luck, and that the season
is for him a failure. Only
1 or 2 good days.

Got back to Hattings 8 PM
(a pretty good day 4 in 10 in)

Went to the store to get
some things. -
The store is a pretty good
one. -
I am going to Hattings
to get some things.

In the afternoon I went to the
cemetery and found the grave of
John W. Smith. The grave was
marked by a simple stone. I
found it of interest because
it was the first of the kind
I had seen. The grave was
very old and the stone was
very weathered. I found it
very interesting and I
went up to it.

Key to Pages

1. The first group of people who are likely to be affected by the proposed project are the local residents who live in the vicinity of the project site. These residents may be affected by the project in a number of ways, including increased traffic, noise, and air pollution. It is important to identify these potential impacts and develop measures to mitigate them.

Figure 1. The effect of the concentration of the *Agrobacterium* suspension on the transformation efficiency of *Agrobacterium* strains. The concentration of the *Agrobacterium* suspension was 10⁶ cells/ml (○), 10⁷ cells/ml (□), 10⁸ cells/ml (△), and 10⁹ cells/ml (◇). The error bars represent the standard deviation of three independent experiments.

1. What is the purpose of the study?
 2. What are the research questions?
 3. What are the hypotheses?
 4. What are the variables?
 5. What are the methods?
 6. What are the results?
 7. What are the conclusions?
 8. What are the implications?
 9. What are the limitations?
 10. What are the future directions?

John J. ...

1. *Chlorophyll a* and *Chlorophyll b* were determined by the method of Arar and Collins (1971) using a Shimadzu 1010 UV-Visible Spectrophotometer. The concentration of chlorophyll was expressed in $\mu\text{g mL}^{-1}$.

Jan 15 Left Alameda for Reno
 16 Left Reno for Lake Tahoe
 17 Left Lake Tahoe
 18 Left Reno

Jan 19 & 20 Arrived in Elko
 Went to see the job. B. and
 out through the canyon to go
 about 100 miles of the Big Bend
 gulches. Went about 100 miles
 then proceeded to the next town
 and thence to Fort Humboldt to see
 about the better from the gulches.

De . . .

1. The first group of people who are likely to be affected by the proposed project are the local residents who live in the vicinity of the project site. These residents may be affected by the project in a number of ways, including increased traffic, noise, and air pollution. It is important to identify these potential impacts and develop measures to mitigate them.

Pravica (6. 11. 1914)

From a distance the mountain appears
 with a single peak. The mountain rises
 to a height of ^{four thousand} feet. Below
 it are hills and a valley. The
 distance of a foot. The
 mountain is covered in snow,
 though it is not yet there.

Leaves gray underneath with white
with distinct veins with a yellow-
ish - tinge of rays whitish.

Posterior part of body shading
into ochraceous, caudal yellow
with narrow white margin. Anal
white, with yellow band distally and
black proximally; ventrals whitish with
yellow wash; pedal orange, inner
yellow.
